

PRIYA JAISWAL

Azure Cloud | DevOps Engineer | Terraform | CI/CD | Linux

+91-8840610240 | priyajaisw9554@gmail.com | linkedin.com/in/priya-jaiswal1103 | github.com/Pjaisw1103

Professional Summary

Computer Science graduate with hands-on internship experience in Microsoft Azure cloud infrastructure, Terraform IaC, and CI/CD automation. Skilled in provisioning modular multi-tier cloud environments, setting up automated pipelines in Azure DevOps, and integrating shift-left security checks (tfsec, TFLint). Dedicated to infrastructure governance, zero-drift deployments, and reliable cloud operations.

Technical Skills

Cloud Platform	Microsoft Azure (VNETs, Subnets, VMs, Bastion, Storage Accounts, Load Balancer)
Infrastructure as Code	Terraform (Reusable Modules, Remote State Locking, Variables, Providers)
CI/CD & Automation	Azure DevOps (YAML Pipelines), GitHub Actions, Git
Security & Code Quality	tfsec (Security Analysis), TFLint (IaC Linting)
Containers & OS	Docker (Containerization, Multi-stage Builds), Linux (Ubuntu Administration)
Networking & Protocols	Subnets, Network Security Groups (NSGs), Ports, Inbound/Outbound Rules, SSH Keys

Experience

DevOps Engineer Intern

Jan 2026 – June 2026

DevOps Insiders

Remote, India

- Provisioned core Azure resources (VNETs, Subnets, Bastion Host, VMs, Storage Accounts, NSGs) using modular Terraform, speeding up setup time by 15%.
- Configured remote state storage on Azure Blob Storage with distributed state locking, preventing concurrent deployment conflicts across the team.
- Engineered declarative multi-stage YAML pipelines in Azure DevOps to automate build, testing, and deployment workflows across environments.
- Integrated automated security checks using **TFLint** for syntax linting and **tfsec** for pre-deployment IaC vulnerability analysis.
- Managed infrastructure code repositories using Git branching workflows, enforcing PR approvals and authoring deployment runbooks for the team.
- Conducted root-cause analysis (RCA) on pipeline execution failures and Linux system bottlenecks using build logs to maintain environment stability.
- Authored reusable Bash maintenance scripts on Ubuntu instances for routine environment setup, health monitoring, and system diagnostics.

Projects

Secure 3-Tier Web Application Infrastructure on Azure | Azure, Terraform, CI/CD, Load Balancer

- Architected and deployed a modular 3-tier infrastructure (Web, App, DB tiers) across isolated subnets using reusable Terraform scripts.
- Secured traffic flow by configuring zero-trust NSG rules and Azure Bastion for private VM administration without exposing public IPs.
- Built multi-stage Azure DevOps pipelines, reducing manual deployment effort by 40% and achieving 99% environment rollout reliability.

Automated Infrastructure CI/CD & PR Validation Pipeline | Azure DevOps, GitHub Actions, tfsec, YAML

- Engineered a branch-driven CI/CD pipeline triggered on Pull Requests to automate Terraform validation, security scanning, and speculative plan runs.
- Integrated **tfsec** and **TFLint** into pipeline gates to block hardcoded credentials, open ingress ports, and non-compliant cloud configurations.
- Implemented multi-stage approval workflows for DEV and QA environments, reducing deployment rollback rates and speeding up PR reviews by 30%.

Education

Dr. A.P.J. Abdul Kalam Technical University

2022 – 2026

B.Tech in Computer Science and Engineering | CGPA: 8.43 / 10

Lucknow, Uttar Pradesh, India

Jawahar Navodaya Vidyalaya, Balrampur (CBSE)

2021

Intermediate (PCM): 84.4%

Uttar Pradesh, India
